

NRMCA Pervious Concrete Contractor Certification Course

PROGRAM SUMMARY

This program is designed to educate, train and certify concrete finishers in pervious concrete placement. Per ACI Standard Contractor Qualification (ACI 522.1-13), the contractor shall employ no less than; 3 NRMCA certified Pervious Concrete Installers or 1 NRMCA certified Pervious Concrete Craftsman - as members of each placement crew.

Ohio Concrete engineers will provide the half day classroom training necessary for the knowledge in pervious concrete materials and proper placement procedures.

NRMCA provides certification on these following three (3) levels:

A Pervious Concrete Technician is a person who has demonstrated knowledge about proper procedures to place, compact, finish, edge, joint, cure and protect pervious concrete pavements, but who lacks the requisite field experience to qualify as a pervious concrete Installer or Craftsman.

A Pervious Concrete Installer is a person who has demonstrated the ability to place, compact, finish, edge, joint, cure and protect pervious concrete pavements and has documented a limited project-based field experience in placing pervious concrete. Ohio Concrete must verify that the NRMCA certified Pervious Concrete Technician has successfully installed a minimum of three projects with a total area exceeding 10,000 SF of pervious concrete.

A Pervious Concrete Craftsman is a person who has demonstrated the ability to place, compact, finish, edge, joint, cure and protect pervious concrete pavements and has documented a higher level of field time based experience in placing pervious concrete. In addition to the above Installer requirements, the Craftsman must either provide documentation of 3000 hours of pervious concrete experience or complete the performance evaluation and document 1500 hours of experience. The Craftsman must possess a current ACI Flatwork Finisher Technician or Craftsman certification at the time of application.

Certification Requirements:

Following the training, a written examination is administered and consists of approximately 50 multiple-choice questions. The passing grade for the written examination is 75%. During the performance evaluation, each examinee must demonstrate procedures for placing, compacting, finishing, edging, jointing and beginning curing a pervious concrete slab. The examiner will observe and evaluate the techniques used and record passing or failing grades on the various procedures.

Recertification is required every five years and requires successful completion of a written examination.
