

CONCRETE TRUCK FLEET MAINTENANCE

Enzo's Cleaning Solutions

Sandusky, Ohio

WHO WE ARE & WHAT WE DO FOR YOU

We create a custom fleet preservation and cleaning program to solve your specific needs. This includes climate, what is used to treat your roads, and water quality (hard or soft). All these factors go into designing the correct system and choosing the right detergents for washing your fleet.

System equipment may include:

- Pressure Washer
- The Neutralizer Undercarriage Wash System
- Awash Brush
- Boom or Festoon System
- Corrosion inhibitor
- Brushless Truck Wash and D-Salt Salt Neutralizer
 - Both of these products are diluted at a 20:1 ratio
 - A 55 gallon drum of each chemical yields you 1155 gallons of each and you're spending less than \$1.00 to wash and neutralize each vehicle

Our D-Salt product stops the corrosion process, neutralizes the salt and prevents the crystallization from forming on all metal surfaces.

BENEFITS OF FLEET PRESERVATION

It saves you money!

Removing salt and brine effectively is critical to prolonging the life of your customers vehicles. Soap and water are not enough. You must neutralize the salt to prevent the corrosion.

Our program will reduce the frequency of repair and replacement on the following items, among others:

- Frame Rails
- Oil Pans
- Brake Lines
- Fuel Tanks
- Vehicle Body
- Entry Steps on buses

The Neutralizer

Portable Undercarriage Wash Unit

WHATS THE DIFFERENCE?

CHISEL

- NON-CORROSIVE
 - Does not harm any part of the vehicle
- Organic Acid
 - Very biodegradable, often disposed of into gray water pits
- No PPE required (cost savings)
- Employees appreciate the ease of use and reduced maintenance on vehicles

HYDROCHLORIC ACID

- Damaging to fittings, ECU enclosures, aluminum, and paint
- Requires personal protective equipment when using and handling
- Not biodegradable, should not go down drains

Picture of an ECU for the Air-Brake system on a concrete truck which has been cleaned with Hydrochloric Acid.

ECU DAMAGE

These enclosures are Cast Aluminum. The hydrochloric acid actually ate away the aluminum from the rubber seal between the two housing enclosures and allowed chemical and water into the circuitry.

This fleet owner switched to Chisel after having to replace about a dozen ECU's on trucks whose air-brakes didn't work (e.g. the brakes locked up). They made the change nearly 10 years ago and still use Chisel without any problems.

Common problem with Hydrochloric Acid based cleaners is residual rust that forms a few days after cleaning.

HYDROCHLORIC ACID

CHISEL

SAME TRUCK, A FEW DAYS AFTER WASHING

CHISEL APPLIED WITH FOAM

AFTER FINAL RINSE

FOAMER RUNS OFF THE COMPRESSED AIR ON THE TRUCKS

RESTORATION PRODUCTS

OneRestore

This breakthrough product provides remarkable versatility, cleaning power and safety all in one. Capable of removing the deepest stains from virtually any surface, it is also used to safely restore glass and anodized aluminum.

NMD 80

NMD 80 is a powerful detergent-based solution designed for safe and effective removal of mortar smears and efflorescence from masonry surfaces. It can be used on all masonry substrates including brick, stone, synthetic stone, precast concrete, designer or colored block. It works great to remove polymeric sand haze.

BEFORE & AFTER

Val 6 Heaters

DAYSTAR

- **HIGH EFFICIENCY** - The "Daystar" will usher in a new era of high efficiency 'oil fired' space heating with 100% heat recovery from the oil burnt.
- **DUAL HEATING SYSTEM** - The "Daystar" expands the "VAL6" world by adopting the dual heating system of radiant heat and forced air heat.
- **VERSATILE** - Every "VAL6 series" oil heater can be operated by diesel (#1) or kerosene.
- **ULTRA PORTABLE** - Weighing only 40 pounds, the Daystar is ultra portable and can be used virtually anywhere you need to stay warm, indoors and out.

KBEL5L 2-Step

- **SUNLIGHT WARMTH** – VAL6's radiant heat penetrates evenly and directly into surfaces just like sunlight.
- **BEST CHOICE FOR OUTDOORS** – VAL6 is not affected by wind, unlike forced air heaters that suffer from heat loss in the ambient air.
- **HEAT TRANSFER** – VAL6 generates infrared heat directly to the object without any air movement creating a dust-free comfortable environment.
- **ODORLESS** – VAL6's perfect combustion system produces no odor and no smoke while running.
- **ENERGY SAVINGS** – VAL6's state of the art combustion chamber enables virtually 100% fuel to energy conversion.
- **PORTABLE** – This heater can be taken virtually anywhere that you need heat.

EPX

- **LARGER RADIATION DISK** – Compared to our regular VAL6 series, the radiation disk is 20% larger. Because of this, the EPX is able to radiate the infrared heat to objects further and wider away.
- **HIGH/LOW OUTPUT CONTROL** – The EPX has an output control that enables its user to choose between a high or low output thus making it very economical.
- **LONG OPERATIONAL TIME** – With a 15 gallon tank, the EPX is able to operate continuously for 20 hrs on the low output setting and 15 hrs on the high output setting. This enables it to operate all night long without refueling.
- **BUILT IN HEATER FOR FUEL LINE** – As ambient temperature decreases, viscosity increases, to counterbalance this effect, a heater is built into the fuel line to keep the fuel moving smoothly.
- **BUILT IN THERMOSTAT** – The surrounding temperature can be maintained by the built in thermostat. An external thermostat can also be attached via a connector to control temperatures that are a distance away.
- **ADVANCED MONITORING SYSTEM** – Color indication lamps are equipped in the main control panel. Not only does this make the mode of operation available, but prompt troubleshooting is now possible by attaining precise information via various safety devices.
